4.5 Transient Conduction in Spheres Example 4.4: Sphere with Surface Convection • The heat equation for transient radial conduction in a sphere is $\frac{\partial}{\partial t} (r^2 \frac{\partial \theta}{\partial r}) = \alpha \frac{\partial^2 \theta}{\partial r^2}$ (4.20) • This is a homogeneous PDE. • Only the r-variable can have two homogeneous boundary conditions.

Lecture 01 (2014). Transient (unsteady) heat conduction: Introduction to Chapter 4

We have seen in Chapter 4 that when problems have more than one dimension, it can become difficult to solve the heat conduction equation. Time is a dimension, so introducing time as a variable introduces difficulties analogous to those introduced in Chapter 4.
